Lecture 2

Reports on Our “One Health Education”

Kana Koga

Teacher, Fukuoka Kaisei Prefectural Senior High School

Our school has been designated as a One Health Promotion Education and Research Cooperation School since September last year, and we have been conducting education that incorporates one health for all grades. In class, an overview of One Health was explained and lectures were given, and the students engaged in hands-on activities such as community cleaning and forest training, as well as activities and research on shelter cats and dogs. Awareness of One Health has increased at our school, and some students are conducting educational activities. We consider it necessary to enhance school education and guidance in the future to further increase students' awareness and actions.
